

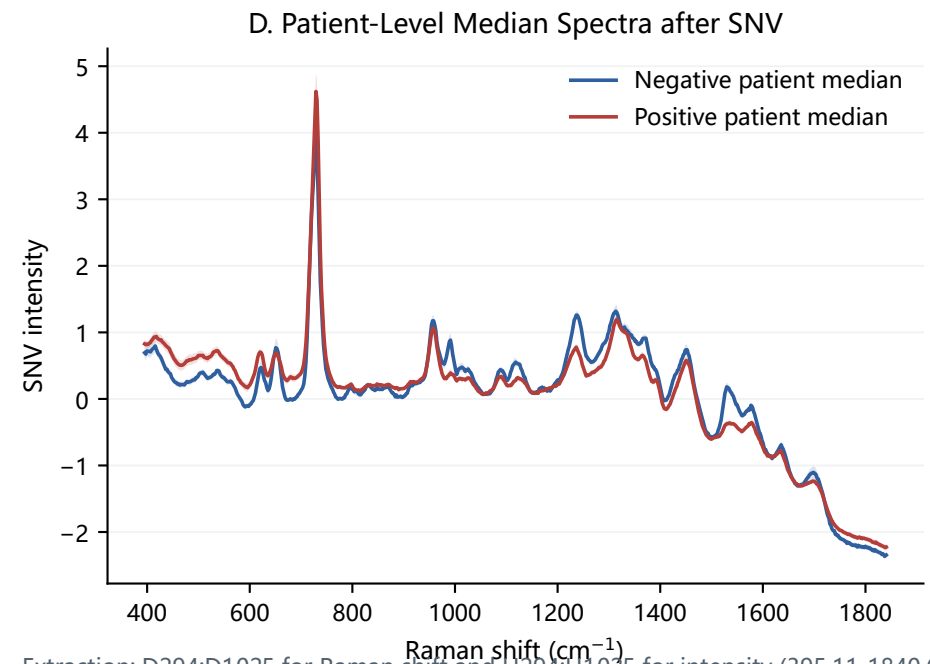

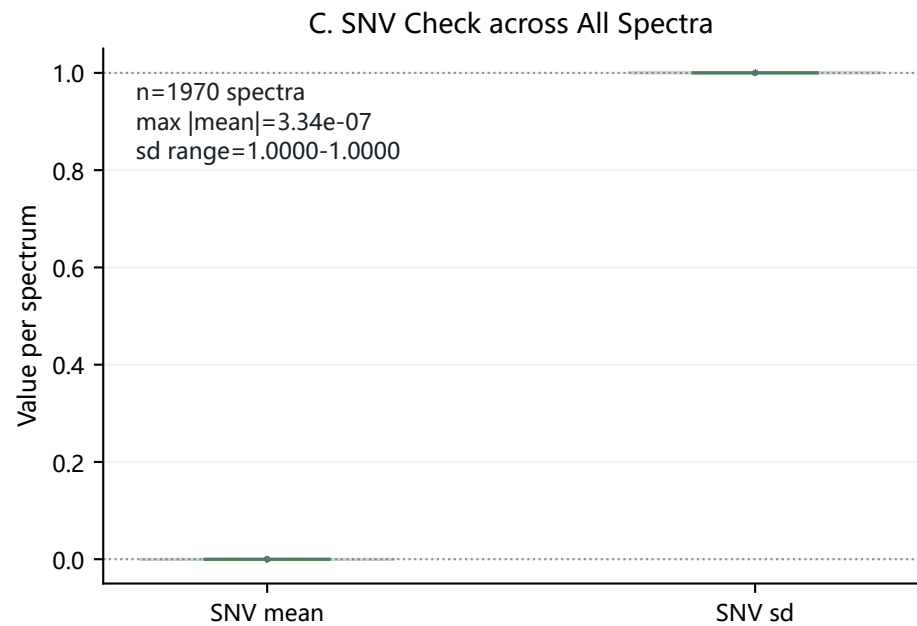

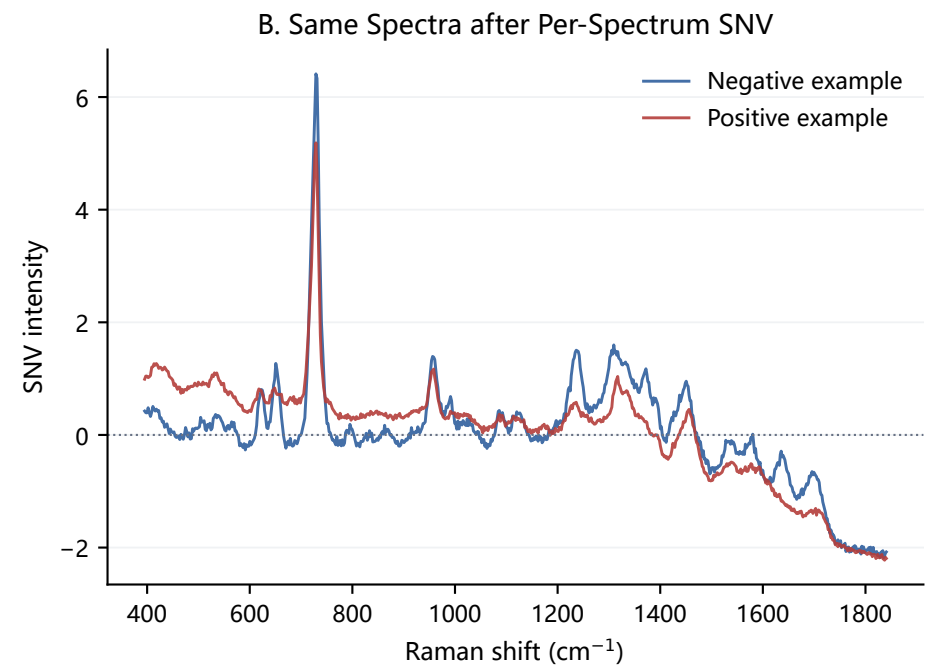

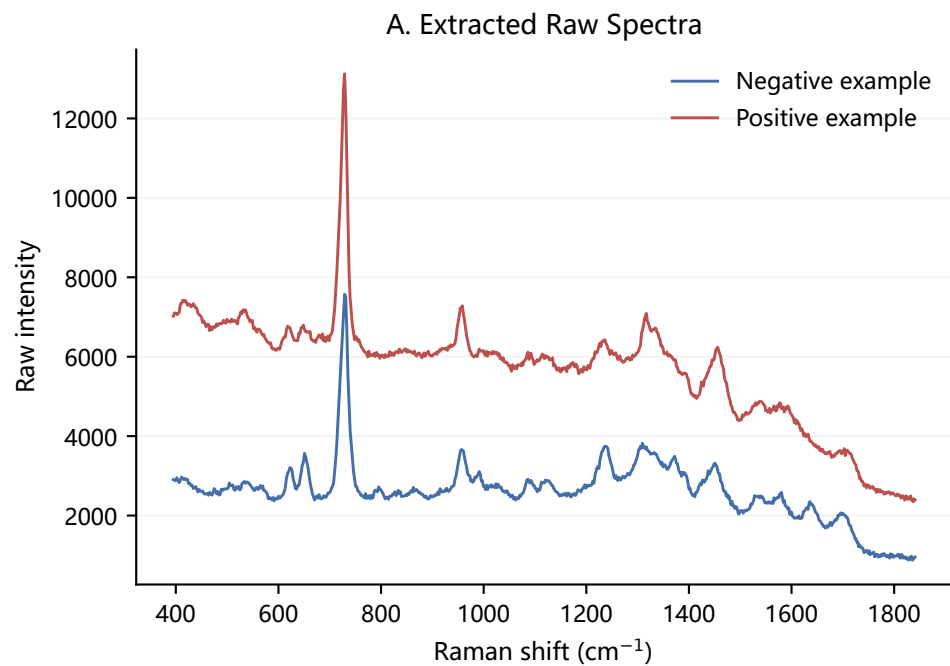

Figure 3. Spectrum Extraction and SNV Preprocessing Quality Control

Data source: raw CSV files under DentalPlaque_SERS_Toolbox/牙菌斑SERS光谱/阳性+ and 牙菌斑SERS光谱/阴性-. Extraction: D294:D1025 for Raman shift and H294:H1025 for intensity (395.11-1840.62 cm^{-1}).

Dataset: 1970 spectra from 52 patients, 732 points per spectrum. Example spectra were selected deterministically by within-label median raw mean intensity: negative 阴性_-20_01943; positive 阳性+_14强_00961.
